Hi Dan

I've been in Sunny FLA for a week and just about melted in the 75 degree temps (plus wonderful humidity)! It was glorious. Will be back in the lab tomorrow and can pack up aliquots of everything we have if you would like me to. We have Eastman MCHM, a PPH sample, as well as material from the tanks themselves- which are mixes of MCHM and PPH. We got a sample from an adjacent tank as well as something that was supposed to be from the leaker- but it seemed to be very dilute.

I sent some of the material to Larry Zintek at R5 before I left. He was going to to LC/MS/MS screening. I did HPLC/uv

Hi Jenny,

How are things in Maryland? Are you guys staying warm and keeping up with the snowfall? We keep getting these little storms that drop the temperatures and some snow for a day, then move east and become bigger by the time they hit your area. (We did have a 100 car pile-up on Pena Blvd last Saturday when one of those little buggers came through.)

Anyway, I was wondering if you are doing any sample analysis relating to the Freedom Industries spill that happened in January. Specifically, I was wondering if you might have samples of the manufacturer's products including the crude MCHM, from Eastman, and PPh and diPPH, both from Dow.

Dan
